Technical Skills

Languages: Rust, C++, Swift, Python, Java, C#, TypeScript, JavaScript, SQL, Bash
Frameworks: React, React Native, SwiftUI, Tauri, Node.js, Express, Combine, SwiftData, Boa
Databases & Tools: MongoDB, SQLite, PostgreSQL, Git, Docker, Jenkins, CMake, CI/CD, Linux
Protocols: REST, GraphQL, gRPC, WebSocket, OAuth 2.0, UCI
Concepts: Multithreading, Systems Programming, On-Device AI, OCR, Local-First Architecture

Education

University of Guelph

Bachelor of Computing

Sep 2026 – May 2027

Guelph, Ontario

George Brown Polytechnic

Advanced Diploma in Computer Programming and Analysis

Jan 2024 – Apr 2026

Toronto, Ontario

Experience

Research Assistant

George Brown Polytechnic

May 2026 – Present

Toronto, Ontario

- Contributed to a cloud-based energy management platform in collaboration with industry partners.
- Built backend services and data pipelines using **Node.js**, **Express**, and **PostgreSQL** to support scalable infrastructure.
- Improved API performance and system reliability through optimization and refactoring of core components.

Backend Developer

Paulos Poetry

Aug 2024 – Nov 2024

Toronto, Ontario

- Architected scalable backend infrastructure using **Node.js** and **MongoDB** to support platform growth.
- Optimized **Express** API endpoints, achieving a 20% improvement in content submission throughput.
- Refactored legacy content delivery modules to enable a high-concurrency frontend experience.

Hardware & Software Analyst Intern

Toronto Metropolitan University

Sep 2022 – Apr 2023

Toronto, Ontario

- Developed an internal database for sensitive records management, reducing data entry errors by 15%.
- Coordinated deployment of 50+ enterprise devices, ensuring adherence to institutional security protocols.
- Executed secure decommissioning and data sanitization for 100+ hardware units with zero security incidents.

Data Quality Analyst

Learning Enrichment Foundation

Jun 2022 – Sep 2022

Toronto, Ontario

- Audited employee, financial, and customer records using SQL and Excel, resolving inconsistencies to uphold data integrity.
- Standardized CRM customer record formats, reducing duplicate entries by 20%.
- Partnered with cross-functional teams to establish data governance policies aligned with compliance standards.

Projects

CoreX (Chess Engine) | C++20, Multithreading, Algorithms, CMake

Dec 2025 – Present

- Built a 1800+ Elo chess engine in **C++20**, compliant with the UCI protocol.
- Implemented **Bitboards** and **Zobrist Hashing** for efficient board representation and transposition table caching.
- Improved search performance via **Alpha-Beta pruning** and iterative deepening to maximize nodes-per-second.

Serenity+ | Swift, SwiftUI, SwiftData, Combine

Dec 2025 – Present

- Shipped a privacy-focused mental health tracking app to the App Store using **SwiftUI** and **SwiftData**.
- Architected reactive state management with **Combine** for habit-tracking logic, scheduling, and push notifications.
- Implemented fully on-device persistence for journals and streaks, ensuring complete user data ownership.
